

Please amend the claims has follows:

1.(cancelled) What I claim as my invention is the creation of a universally recognized method of identifying real estate location quality (through specific statistical classification, methodology, and the resulting graphical representation of income demographics using a GIS) as that of my own. I, Paul McMahon, have never seen this or any such real estate location quality identification method that can be universally recognized and graphically represented on a map—prior to this invention by myself.

2. (new) A method for displaying an graph based on per capita income demographics comprising:

classifying national income statistics into a plurality of distinct income classes designated as letters; and

displaying the graph based on a per capita income for the plurality of distinct income classes.
